Enhanced usability - NMEA 2000 Connectors and Cables

- Leisure marine industry leaders focus on ease of use and practicality

Actisense, the world leaders in the leisure marine industry, have through meticulous research and development unveiled the latest additions to their growing NMEA 2000 product range. The NMEA 2000 range of cables and connectors, designed by Actisense, are fully certified and are available internationally from their network of distributors and dealers.

Actisense, a brand from Active Research Limited, has created their range of cables and connectors to be superior to any similar products available. The focus has been to carefully consider any existing industry install and usability issues found with other manufacturers connectors and have their new range designed to combat these issues and make the user experience uncomplicated and trouble-free.

The Actisense Micro Bulk Cable is UL certified and is available in 100 metre reels. The same cable will be used in the Cable Assemblies that are available in lengths from 10m down to 0.25m. The Actisense T piece provides simple installation where a drop connection is required and the male and female Terminators are used at either end of an NMEA 2000 backbone to ensure proper operation. Further additions to the range include a Power T, featuring a 3m cable to offer flexibility when installing, as well as Panel Mount Connectors.

Managing Director of Active Research Limited, Phil Whitehurst, commented: "When we first started Actisense, we did it to make the lives of installers and boat owners easier and more fulfilling. This series of NMEA cables and connectors will prove greatly useful in both installation and use.
