Cutting Edge Network Diagnostic Software launched by Actisense

- NMEA Reader Utility released by UK Leisure Marine Experts... and it's free!

Actisense, the market leading marine electronics brand from Active Research Ltd, has recently released a brand new version of their 'NMEA Reader' PC software tool. As with all of their products, Actisense have designed the tool with simplicity and efficiency in mind, making the lives of boat owners and operators easier... And best of all, there is no charge!

This small but vital piece of software allows Actisense NGT-1 owners to view NMEA 2000 information directly from the NMEA 2000 network, which can help with user diagnosis of any network problems. 'NMEA Reader' is very helpful to the user as it breaks down the unreadable binary NMEA 2000 messages into easy to read and understand parameters.

The 'NMEA Reader' enables anyone to become an NMEA master. Powerful new features push this further to help a user understand exactly which devices are active on the NMEA 2000 network and the full details of each one. Also included are many other features such as calculating the total network LEN to help with battery power management.

To help with backwards compatibility, 'NMEA Reader' is also very adept at displaying NMEA 0183 information, either through the Actisense USG-1 (Isolated USB gateway) or any other safe connection to the PC. As with NMEA 2000 messages, 'NMEA Reader' intelligently breaks down the NMEA 0183 messages into easy to read parameters.

Phil Whitehurst, Managing Director of Active Research Limited said, "This is something we've been working on for a while and that we genuinely think will make life easier for boat owners and operators. Our NMEA Reader has been designed to help anyone become a master of their NMEA network. Keep an eye on our website for new software and updates!"

Actisense have the 'NMEA Reader' available for [download for free at their website](#).

For more information about Actisense, visit www.actisense.com and follow them on Twitter and Facebook.

-Ends-
