## Operating modes

The PRO-BUF-1 can be configured manually using the 'Mode' pins (also referred to as 'hard-wiring') or via the web browser based configuration tool. Manually configuring the PRO-BUF-1 takes priority over the web configuration tool. An internet connection is not required to access the configuration tool. The factory default setting of the PRO-BUF-1 is 'Buffer Mode 3'.

| "-"" = connect to "PWR -" | $"+"=$ connect to "PWR $+"$ |
| :--- | :--- |
| N/C = No Connection i.e. leave floating | LED will pause for two seconds at the end of the <br> sequence before continuing to flash again. |

| Mode Name | Description | Pin 1 | Pin 2 | LED |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Buffer 1 | Input $1 \rightarrow$ Output 1-12 | - | N/C | 1 Flash | $\begin{aligned} & \text { O} \\ & \stackrel{0}{\omega} \\ & \\ & 3 \\ & 0 \\ & 0 \\ & 0 \\ & 0 \end{aligned}$ |
|  | Inputs Autobaud, Output baud rates follow input |  |  |  |  |
| Buffer 2 | Input $2 \rightarrow$ Output 1-12 | + | N/C | 2 Flashes |  |
|  | Inputs Autobaud, Output baud rates follow input |  |  |  |  |
| Buffer 3 | Input $1 \rightarrow$ Output 1-6, Input $2 \rightarrow$ Output 7-12 | N/C | - | 3 Flashes |  |
|  | Inputs Autobaud, Output baud rates follow inputs |  |  |  |  |
| Autoswitch 1 | Basic Autoswitch, Input 1 OR $2 \rightarrow$ Output 1-12 | - | - | 4 Flashes |  |
|  | Inputs Autobaud |  |  |  |  |
|  | Output baud rates follow Input 1 baud rate |  |  |  |  |
|  | Presence of data detection only |  |  |  |  |
|  | 2000ms Switch delay |  |  |  |  |
| Autoswitch 2 | Smart Autoswitch Input 1 OR $2 \rightarrow$ Output 1-12 | + | - | 5 Flashes | $\begin{aligned} & \text { n } \\ & 3 \\ & 7 \\ & 3 \\ & 0 \\ & 0 \\ & 0 \\ & 0 \end{aligned}$ |
|  | Inputs Autobaud |  |  |  |  |
|  | Output baud rates follow Input 1 baud rate |  |  |  |  |
|  | Presence of data detection only* |  |  |  |  |
|  | $2000 \mathrm{~ms} \mathrm{Switch} \mathrm{delay*}$ |  |  |  |  |
| Combine 1 | Combine, Input 1 AND $2 \rightarrow$ Output 1-12 | N/C | + | 6 Flashes |  |
|  | Inputs Autobaud, Output baud rates follow Input 1 |  |  |  |  |
|  | Simple combine with no overload control** |  |  |  |  |
| Combine 2 | Combine, Input 1 AND $2 \rightarrow$ Output 1-12 | + | + | 7 Flashes |  |
|  | Inputs Autobaud, Output 1 to 6 baud rates follow Input 1, Output 7 to 12 baud rates follow Input 2 |  |  |  |  |
|  | Simple combine with no overload control** |  |  |  |  |
| User Defined Mode | PC / Remote Config*** | N/C | N/C | Pulsing |  |

[^0]All Smart Modes will have additional features added in future firmware updates.

[^0]:    *Autoswitch 1 \& Autoswitch 2 operate the same for initial release. Future release will include sentence and data inspection on the Smart Autoswitch mode (Autoswitch 2)
    **Future release will include smart duplicate deletion, overload indication and AIS stripped when Output baud rate is < 38400 bps on Combine modes
    ***Initial release allows creation of User modes based on Basic Modes but allowing baud rates to be independently configured. Future release will include Alarm relay functionality.
