CONFLICT MINERAL POLICY STATEMENT

Active Research Limited, t/a Actisense, recognises the importance of responsible mineral sourcing and supports international efforts aimed at preventing the trade in minerals from contributing to conflict, human rights abuses, and other serious adverse impacts.

Although Active Research Limited is not directly subject to the US Securities and Exchange Commission (SEC) Conflict Minerals reporting requirements, Actisense recognises the importance of responsible sourcing and the supply-chain expectations of its customers and other stakeholders.

Conflict minerals include tin, tantalum, tungsten, and gold (3TG), which may be present in electronic components and products.

Actisense is committed to supporting responsible sourcing throughout its supply chain. Our commitment is:

- To support internationally recognised principles relating to the responsible sourcing of conflict minerals.
- To work with reputable suppliers and expect them to undertake appropriate due diligence within their own supply chains.
- To request relevant conflict minerals information and supporting declarations from suppliers where appropriate.
- To support customer requests for relevant conflict minerals information, where reasonably practicable; and
- To consider responsible sourcing information as part of our ongoing supply-chain and purchasing decisions.

Actisense will continue to review its approach to conflict minerals and responsible sourcing in response to relevant regulatory, customer and supply-chain requirements.
